

To observe microbes, you need a very good

MICROSCOPE.

The scientists who study them are called

MICROBIOLOGISTS.

Hello!
I find germs
fascinating
as well!

But the VAST majority
of germs are good for us,
for nature, and for the

PLANET.

We couldn't survive without them!

Come, let me introduce
you to some of them!

I absolutely must show you this
amazing virus called the

BACTERIO PHAGE

It's a virus that only attacks
bacteria. It looks like an extra-
terrestrial space shuttle, don't
you think? Can you believe these
microscopic organisms are all
around us, and even INSIDE
of us?
